

Medical Option List

We have several optional tests that can be added to our Premium Health Screening Program.
This is a “tailor-made” examination, which you can pick and choose according to your own lifestyle and needs.
Please make an inquiry when you make an appointment.

	Region to be Tested	Name of Test/Product	Description	Price(tax included)
Common Options	Stomach	<i>Fecal Helicobacter Pylori Antibody</i>	This test determines whether you have a <i>Helicobacter pylori</i> bacterial infection, which can cause stomach ulcers and cancer.	2,200yen
		<i>H. Pylori Antibody Blood Test</i>	Stomach cancer, Stomach ulcer This test determines whether your body has antibodies against <i>Helicobacter pylori</i> (<i>H.pylori</i>).	2,200yen
		<i>H. Pylori Test Package</i>	H.pylori antibodies in blood, H.pylori antigen in stool Sometimes, a blood test alone may not be enough to determine the current activity of <i>H.pylori</i> . When you are performed the blood test and the stool test, we can get more accurate result.	3,850yen
	Large Intestine	Colonoscopy	Colon cancer We perform colonoscopy, and visually exam your lower digestive organs such as large intestine, rectum directly. ◆ This is to be scheduled separately from the comprehensive medical examination.	44,000yen
